

## SCREEN SURFACE

# XPERT

The Xpert screen surface is your solution when high requirements are set for GREEN installations - often a specified demand in schools and new - furnished buildings. Euroscreen® now offers the new flame-retardant (B1) polyester surface in three models; the channel-fixed Diplomat Electric, standard roller version of Linea and the recessed ceiling screen Sesame 2.1. The Xpert fabric features a two - side polymer coating with matt white woven front projection surface with a specially developed pattern structure to spread the projected light even over the surface. This pattern base also provides a superior diffusion in the projected image, making it compliant even higher than the 1080 compliance standard. The fabric is also supplied with a white black-out

backing for superior blocking of incoming light from behind. With the upgraded formula we proudly have created the best surface flatness in a supported fabric used in a Euroscreen® product ever! The fabric is PVC free and manufactured without the addition of substances that might be health hazard such as formaldehyde, CFC, solvents, lead/cadmium/quicksilver

## Quick facts
