

REACT 3.0

The ReAct 3.0 is an unsupported, silver grey front projection surface with enhanced ambient light control. The structure and finish of the material boost the colour contrast and black levels in the projected image (colour temp. 6508 K). At the same time it provides excellent viewing experience even with bright light in the audience area. ReAct 3.0 is Full HD and 8K compliant and the flexible surface ensures an excellent flat viewing surface for fixed frame and Tab Tension screens.
